Summary

Final-year IT student with strong proficiency in Android development using Kotlin and Java, skilled in building high-performance, user-friendly mobile applications. Experienced in modern Android architecture (MVVM, Jetpack), REST API integration, and leveraging AI/ML to deliver impactful solutions.

Education

B.Tech in Information Technology - **Vishwakarma Institute of Technology, Pune** | 06/2022 - 06/2026 | Cgpa: **8.52/10**

HSC - **Sir Parshurambhau College, Pune** | 2020 - 2022 | Percentage: **79.33%**, MHT-CET Percentile: **97.86**

Experience

Android Developer Intern - Mobishaala

09/24 - 02/25

Developed a real-time conversational voice bot for Android using OkHttp, Coroutines, and external APIs (OpenAI/Gemini), optimizing response time by **70-80%**.

Architected and built a book-conversational Android application using MVVM, Room database, and integrating payment gateways, scanner functionality, and a voice bot.

Improved application stability and maintainability by migrating from deprecated Kotlin synthetics to ViewBinding and resolving critical dependency and build issues.

AI Software Development Intern (AI + Android) - Eduplus Campus

07/24 - 12/24

Designed and developed an Android application using CameraX for multi-page scanning and automated PDF generation, integrating with a Flask backend via OkHttp and Coroutines.

Implemented robust background processing with WorkManager for reliable asynchronous uploads and data synchronization of AI-evaluated results back to the Android app.

Achieved **92%** handwritten text recognition accuracy and reduced manual grading time by nearly **90%** by integrating an AI evaluation pipeline into the Android workflow.

Projects

AI-Powered Learning Management System (Kotlin, MVVM, OkHttp, Firebase)

Developed a mobile-first Android LMS using Kotlin and MVVM, enabling AI-generated feedback, viva exams, and real-time score dashboards via REST APIs and JSON parsing.

Integrated Firebase Authentication and streamlined data exchange with dual Python/Node.js backends using OkHttp and Coroutines for efficient, low-latency communication.

Implemented real-time AI proctoring and voice-based viva modules, streaming low-resolution frames and audio from Android for server-side inference.

VitalLink — Android Health Monitor (Kotlin, LiveData, Koin, WorkManager)

Developed an Android health monitoring app integrating with an ESP32 device via a lightweight REST API, displaying real-time ECG and SpO₂ data using OkHttp, Coroutines, and LiveData.

Architected the application using Koin for dependency injection and streamed vital signs to Firebase Realtime Database for remote monitoring and analytics.

Implemented a smart alert system using WorkManager and push notifications, triggering automatically for medically-unsafe thresholds to enhance patient safety and user experience.

Skills

Programming Languages: Kotlin, Java, Python

Frameworks Libraries: Android SDK, Android Studio, Jetpack Compose (implied by CameraX), Jetpack (ViewModel, LiveData, Room, Navigation, WorkManager, CameraX), MVVM, Koin, OkHttp, Coroutines, Flow, Firebase, MPAndroidChart, Flask

Databases: Room, SQLite, Firebase Realtime Database, ChromaDB

Tools: Git, Android Studio, VS Code, Docker

Concepts: REST APIs, JSON Parsing, Dependency Injection, Asynchronous Programming, Clean Architecture, Material Design, OOP, DSA, AI/ML Integration

Achievements

2nd place at IEEE SPIT HackXplore Hackathon, **1st** place Track Winner at QUASAR **3.0** Hackathon

Ranked **416 / 73K** participants in Amazon ML Challenge **2024**, Ranked **~3000** participants in Amazon ML Challenge **2025**

Certifications and Publications(IEEE)

SmartGrade: Automated Assessment with Cheat Detection

SaraIMarathi: A Regional Language Summarizer Using LLM

Android Development - **Udemy**

Introduction to Cloud Computing - **Coursera**
